Uniqkey

Protect cloud, desktop and mobile services with Uniqkey's Identity Access Management (IAM) platform combined with streamlined, secure password management.

Auto-fill usernames, passwords, and 2FA codes

Key features

- **Complete visibility and granular control of services, accounts and employee access**

- **SCIM 2.0 integration**

- **Customisable access privileges by IP, location and time**

- **Simple onboarding and offboarding processes**

- **Meets strict EU data security standards and is 100% GDPR compliant**

- **Data protected by AES 256 and SHA-3 encryption**

- **ISAE 3402 certified based on ISO 27001 controls**

- **Security scores for services and applications based on password strength**

- **Zero-knowledge Proof and Secure Remote Password Protocol**

- **Auto-fill credentials and automatic 2FA**

Why partner with Uniqkey?

Through its centralised, intuitive platform, Uniqkey combats shadow IT and strengthens access management and security strategies. Integrating with existing user directories, it goes beyond traditional password management, enabling seamless IAM and control of employee access through complete visibility of services, and accounts. Uniqkey mitigates security risks, simplifies compliance, and enhances operational efficiency, making it an indispensable tool for keeping IT environments secure.

Gain full visibility into services used
Access Management platform gives full overview and control of all employee accesses and services.

Automate employee logins
Browser extension auto-fills credentials and 2FA code on cloud, mobile and desktop services.
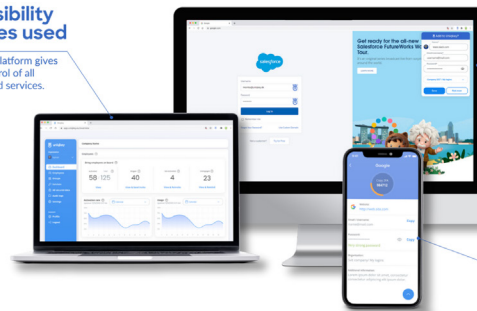

Store and manage passwords safely
The Password Manager remembers and stores private and work passwords safely.

Challenges Uniqkey solves

As cloud and SaaS adoption grows, organisations increasingly lose visibility in digital environments. Shadow IT amplifies security and compliance risks by allowing employees to access unauthorised tools and applications daily. Uniqkey eliminates this, enabling admins to control permissions and simplify and secure access across their organisation, all through a single platform.

Opportunities for MSPs

Gain a powerful opportunity to enhance your access management offerings with Uniqkey's IAM solution. With Uniqkey, you can help clients centralise access management, enforce stronger access policies, and reduce the risks associated with weak password practices and access to unauthorised applications.
