

Heimdal offers an end-to-end, proactive, unified cybersecurity suite built to defend against next-gen threats. Its unique, multi-layered approach provides comprehensive protection through a fully integrated network and endpoint protection suite.

Key features

- Simple setup using MX Records
- Accurate spam filtering
- Botnet and advanced malware protection
- DKIM/SPF and DMARC sender check
- Comprehensive, customisable threat alerts
- Deep attachment scanning and deep content scanning
- Forensic-level data logging of emails
- Optional Microsoft 365 integration
- 90 days email relay included as standard
- Full audit log
- ISO27001 and SOC2 Certified Hosting

Heimdal is the only vendor in the market with an offering that combines next-generation antivirus, DNS-level traffic filtering on the endpoint, silent, automated third-party patch management, privileged access management, email security, and a managed service in one platform.

Why Heimdal Email Security?

Heimdal Email Security is advanced, state-of-the-art software that blocks malware, detects and neutralises threats, and creates a secure email environment for any organisation. It adds a layer of protection in M365 environments. Robust encryption, scanning, and customisable quarantine reports enable businesses to meet compliance regulations.

Challenges Heimdal Email Security solves

Email threats are among the most common risks, with spam emails flooding inboxes, diminishing productivity and bringing a host of cybersecurity dangers like malware, ransomware and phishing to organisations daily. Robust email security is essential in any MSP and IT provider's offering. Heimdal Email Security is proven to effectively block all email threats through advanced protection tools, making it a high-quality product for clients.
