

Heimdal offers an end-to-end, proactive, unified cybersecurity suite built to defend against next-gen threats. Its unique, multi-layered approach provides comprehensive protection through a fully integrated network and endpoint protection suite.

## Key features

- Pre-emptive vulnerability management for Windows and third-party applications
- Silent and automatic patching of third-party applications from anywhere in the world on any schedule
- View and manage software inventories.
- Centralised admin console with all the tools required for patching and vulnerability management
- Meets industry compliance regulations including GDPR, CIS18, NIS2, Cyber Essentials, and more
- Patches are deployed in under 4 hours – the shortest industry time for patch updates
- All packages are encrypted before delivery

Heimdal is the only vendor in the market with an offering that combines next-generation antivirus, DNS-level traffic filtering on the endpoint, silent, automated third-party patch management, privileged access management, email security, and a managed service in one platform.

## Why Heimdal Patch and Asset Management?

Heimdal Patch and Asset Management provides complete visibility of software inventory, enabling your clients to customise patch management and deployment. It supports over 200 third-party software, including Adobe and Chrome. It provides reports and demonstrates compliance, allowing users to update or roll back software for OS, uninstall any software, install 'approved' software, and set schedules for updates.

## Challenges Heimdal Patch and Asset Management solves

It is critical for organisations to demonstrate compliance with Cyber Essentials, GDPR, and the UK PSN software patching regulations. Heimdal Patch and Asset Management is a proactive approach to vulnerability management. It allows users to manage their vulnerabilities and patches, strengthening overall security.
