

Parallels Secure Workspace provides highly secure, audited access to desktops, company files, and various applications, including legacy, web, and SaaS, via a browser-based workspace accessible on any device.

Key features

- **Easy deployment and management:** Quick to set up, single-console administration.
- **All-in-one remote work solution:** Supports virtual desktops and applications.
- **White label customisation:** Offers branding and personalisation options.
- **Usage-based licensing:** Simple, scalable licensing model.
- **Built-in security:** MFA, SSL encryption, and advanced audit features.
- **Flexible multi-cloud options:** Supports any cloud with AVD integration.
- **HTML5 workspace:** Access from any browser, with smartcard and dual-screen support.
- **Centralised IT management:** Streamlines control across tenants and devices.
- **Collaboration tools:** File sharing, app session sharing, and Teams web client support.
- **Multi-tenancy support:** Customisable per tenant, scalable from a single VM.

Why partner with Parallels?

Complementing this, Parallels RAS offers IT teams a streamlined, flexible solution for managing virtual apps and desktops, with single-console administration, integrated monitoring, and secure remote access. Overall, this simplifies IT management and ease of administration, making it an ideal choice for organisations seeking security and operational efficiency.

Challenges Parallels solves

Parallels provide MSPs with a secure, flexible remote work solution, enabling access to virtual desktops and applications across any device. Secure Workspace integrates seamlessly with existing IT, offering secure, browser-based access without agents. RAS streamlines deployment and management with a single admin console and usage-based licensing, reducing total ownership costs by up to 81%.

Opportunities for MSPs

Parallels offers MSPs a powerful, all-in-one remote work solution that enables secure, flexible access to virtual desktops and applications across any device. Single-console administration simplifies IT management and accelerates deployments, while customisable, white-labelled experiences enhance client retention.

Flexible, usage-based licensing, multi-cloud options and Azure Virtual Desktop (AVD) integration support scalable revenue streams with minimal upfront costs. Parallels' MSP Partner Program also provides dedicated support, training, and marketing tools, helping partners grow in a dynamic digital landscape.
